## INTRODUCTION.

---

The text of the *Vibhrama-viveka*, by Ācārya-*Maṇḍana-miśra*, which appeared in Vol. I of the Journal of Oriental Research, Madras, is based on a single manuscript of the work deposited in the Government Oriental Manuscripts Library, Madras. The manuscript shows lacunae in several places and corrupt readings in several places. However, much of the matter in the *Vibhrama-viveka* is found partly in verse and partly in prose in the *ga-kāṇḍa* of Ācārya-*Maṇḍana*'s great Advaita work *Brahmasiddhi*. (*Vide* pages 136-150 of the third volume of the *Brahmasiddhi*, edited by Mahāmahopāyaya Professor S. Kuppuswami Sastri—to be issued shortly from the Government Press, Madras). With the help of this portion of the *Brahmasiddhi* and the other works of *Maṇḍana*, more especially his *Vidhiviveka*, with the help of Kumārila's *Śloka-vārtika*, it has been found possible to suggest additions and emendations filling up the lacunae and removing the errors. The additions and emendations are enclosed within brackets [ ] and they are the best that the editors have possibly suggest with the available material.

Ācārya-*Maṇḍana* was a great Mīmāṃsaka and Advaitin. In all probability, he was one of the disciples of Kumārila and was one of the elder contemporaries of Rāma. He was one of the foremost exponents of a Sāṃkara phase of *advaita*, which exhibited striking formal differences as compared with Śaṅkara's *advaita*, such as, for instance, the non-recognition of *Jīvan-mukti* and the insistence on meditation as an indispensable means to the *mahāvākyas* leading to Brahman-realisation. The common belief that *Maṇḍana* is identical with *Sureśvara*, one of the *Sannyāsin* disciples of Śaṅkara, is based

on some recent confusion introduced in some of *Śaṅkaravijayas* and is wholly at variance with fact. The reasons which lead to these conclusions are explained at some length in the introduction of the edition of *Brahmasiddhi*, above referred to. In addition to *Tibhrama-vivēka*, Ācārya-Maṇḍana wrote the *Tibhrama-vivēka*, *Bhāvanā-vivēka*, *Brahmasiddhi*, *Sphoṭasiddhi* and *Mīmāṃsā-bhāṣyānukramanīkā*. Of these six works the printing of the *Brahmasiddhi* and *Sphoṭasiddhi* is finished and they will shortly be issued respectively by the Government Press and the Sanskrit department of the Oriental Institute of the Madras University; and the other four works have already been made available in print.

Error or erroneous cognition is the central problem of epistemology and it is the main theme of this work. The four chief theories of *bhrama* (*Khyātirāda*)-*khyāti*, *asat-khyāti*, *akhyāti* and *anyathākhyāti* are briefly stated and critically reviewed in this work. The Bhāṭṭa theory of *viparītakhyāti*, which is practically the same as the Nyāya theory of *anyathākhyāti* with a slight variation, is sought to be maintained. In this, Maṇḍana incidentally prepares the way for the *advaita* theory of *anīrvacanīya-khyāti*. The theory of the Prābhākaras is fully refuted by an elaborate course of reasoning.

It would be very helpful to students of Indian epistemology to make, in this connection, a critical and comparative study of the various theories of *bhrama* (*Khyātirāda*) propounded by the different schools of philosophy. There are five theories of *bhrama*; viz. the theory of *self-apprehension* (*ātmakhyāti*), the theory of *non-being's apprehension* (*asatkhyāti*), the theory of *misapprehension* (*akhyāti*), the theory of *misapprehension* (*anyathākhyāti*), and the theory of *indefinable's apprehension* (*anīrvacanīyakhyāti*). The Yogācāra school of Buddhism, otherwise known as the *Vijñānavāda*, explains erroneous cognition as consisting in the

which is identical with consciousness, externalising itself in the form of objects like silver; all determinate cognitions of objects, according to the Yogācāra subjectivists, are erroneous; this theory of *bhrama* is called *ātma-  
 tivāda* (theory of *self-apprehension*). The Nihilist school of Buddhists, otherwise known as the Mādhyamika school, explains *bhrama* as consisting in the cognition of a *non-being* (*asat*); in the case of the erroneous cognition 'this is silver' which arises where there is no silver, the object of the cognition is a non-being (*asat*); the strength of experience, even non-being should be made to admit of being cognised; this theory of *bhrama* is known as *asatkhyātivāda*. The Prābhākara school of Mimāṃsikas explains all cases of *bhrama* as cases of *apprehension*. They contend that, in the cognition of silver where only nacre is seen, two cognitions arise in fact, one cognition being the perception of nacre in general way as *this* (*idam*) and not as possessing the active feature of nacreity, and the other cognition being the recollection of silver previously cognised elsewhere. The recollection of silver in this case is not identical with the knower as recollection, but is cognised by the knower merely as cognition, since the object of recollection is silver, silver is thought of merely as silver, stripped of its association with past time and the particular place where it was seen. The Prābhākaras describe such recollection by the phrase *pramustaṭatattākasmarana* or 'recollection of an object robbed of its *that-ness*'. In certain other cases of *bhrama* like 'the conch is yellow' (*śaṅkhaḥ śaṅkhaḥ*), the Prābhākara theorist explains that imperfect perceptions arise, one being the visual perception of a conch as such, its real colour being missed, and the other being the visual perception of the yellow colour of the bilious matter which causes jaundice (*adruvāpītimā*), the relation of the yellow colour to the bilious substance being missed. Thus, in the case of *bhrama*, two distinct cognitions—either recollection or two perceptions—arise.

yamakas by saying that consciousness comprises its configuration (*sākāram vijñānam*), and in its externalised form, it is presented in itself as its object. But one can easily see that this explanation involves a number of inconsistencies. The Nyāya realist realises that nothing but reality (*sat*) admits of being presented in experience; he explains that error consists in confounding one reality with another reality and complicates his theory by trying to bring the absent reality within the range of the sense-organ concerned through the extra-normal relation (*alaukika-sannikarṣa*) represented by some form of cognition itself (*jñānalakṣaṇapratyāsatti*). The Bhāṭṭa realists, while adopting the theory of *anyathākhyāti*, find it necessary to accommodate themselves to the *asatkhyāti* theory, in holding that the *samsarga* element in the apprehension of nacre as silver and in such other cases is a non-being (*asat*). The Prābhākara realist sees the danger of compromise with the *asatkhyāti* on the one side, and on the other side, sees how the Nyāya theory that one reality is presented as another reality (*sadentaram sadantarātmanā grhyate*) would inevitably reduce itself to a variety of *asatkhyāti* for the obvious reason that one reality never exists (is *asat*) in the form of another reality. In order to avoid these difficulties the Prābhākara realist adopts the extreme theory of *akh-yāti*. Though this is the only theory which could be said to be perfectly consistent with realism, it is not adequate to account for the volitional decision (*pravṛtti*) and the further activity that follows a *bhrama*. As Vācaspati-miśra points out in his *Tātparyatīkā* and *Bhāmatī*, (in the *akh-yātivāda*) one could find as much justification in non-identification (*abhedāgraha*), for the two cognitions in cases of *bhrama* appearing as two cognitive units and consequently for the two objects in such cases appearing as different, as in non-discrimination (*bhedāgraha*), for the two cognitions and their two objects in such cases appearing as one and the same; and as a result, if there should be volitional decision in the direction of activity

on the latter ground, there should be volitional decision in the opposite direction of abstention on the former ground and the knower should hang between *pravṛtti* and *nivṛtti*. These difficulties, the Advaitins endeavour to meet by propounding the theory of *anirvacanīya-khyāti* and explaining *bhrama* as experience of a relatively real object, which is neither absolute being (*sat*), nor absolute non-being (*asat*), nor both. According to the Advaitins, when naere is seen as silver, for instance, what happens is this:—over the real substratum (*adhiṣṭhāna*) represented by a naere, or more correctly, naere-delimited spirit (*śuktyavacchinnaacaitanya*), the beginningless positive mist of nescience (*anādibhāvarūpājñāna*) happens to be thrown; when the sense of sight comes into relation with naere in a general way, the mist is partly dispelled by the cognitive modification of *antaḥkaraṇa* which takes the form ‘this’ (*idamākāravṛtti*); the mist of nescience, however, continues to veil the nacreness of what is seen as this (*idam*), and reinforced by the prepossessions of the knower’s mind and by the similarity between the object seen as ‘this’ and silver, undergoes transformation, with the result that silver comes into being also with the cognition of silver, which is but a cognitive modification of nescience (*śuktyavacchinnaacaitanyādhiṣṭhitāvidyā rajatarūpeṇa rajatākāravṛttirūpeṇa ca pariṇamate*); silver which thus comes into being has relative reality; it is said to be *anirvacanīya* in the sense that it does not admit of being definitely described as *sat* (being), or *asat* (non-being) or both; and it is also said to be *prātibhāsika* in the sense that it is coterminous with its presentation in cognition. It will thus be seen that the Advaitin’s theory of *bhrama* regards it as a cognitive complex consisting of two cognitive factors, one of them being a *vṛtti* of *antaḥkaraṇa* and the other being a *vṛtti* of *avidyā*. According to this theory, the object of a *bhrama* is real in a relative sense and comes into being along with the *bhrama* and lasts as long as the *bhrama* lasts; and there is no need for

accommodation to *asatkhyāti* or for any complication in the form of extra-normal (*alaukika*) sense-relation. That the Advaitins have no particular animus against the advocates of *anyathākhyātivāda* is evident from the way in which they are readily willing to accept the explanation of *anyathākhyāti* in the case of what is known as *sopādhikabhrama*, where the object of *bhrama* happens to be within the normal scope of the sense-organ, as, for instance, in the erroneous perception of a crystal (*sphaṭika*) as red-coloured when a *japā* (China rose) is seen to be in its vicinity. Such students of Indian philosophy as are capable of critically reviewing the five 'theories' of *bhrama* (*khyātivāda*) set forth here would not find it difficult to conceive of an appropriate graph by means of which the epistemological interrelation of these theories may be exhibited and comprehended. If one could imagine that epistemological thought starts with *asatkhyāti* as centre and, in its endeavour to escape from it, swings forcibly between the two diametrical termini of *anyathākhyāti* and *akhyāti*, it would not be difficult to imagine that such thought inevitably describes a comprehensive epistemological circle in the form of *anirvacanīyakhyāti*, which easily accommodates itself to *akhyāti* in respect of the non-discrimination of the two *vṛttis* constituting a *bhrama* and to *anyathākhyāti* by complete surrender in the case of *sopādhikabhrama*.

It would be quite appropriate to consider here the various views regarding the way in which the validity and invalidity of a cognition, or truth and error, or *prāmāṇya* and *apramāṇya* have to be accounted for and ascertained. The Naiyāyikas hold that validity and invalidity of cognitions are made out through extrinsic considerations and are brought about by extrinsic circumstances. In other words, according to the Naiyāyikas, validity and invalidity cannot be said to be intrinsically made out (*svatogrāhya*) or intrinsically brought about (*svatojanya*). Intrinsicity (*svatastva*) in respect of the knowledge of reality consists in reality being

made out by every means by which the cognition having it is ascertained but not ascertained to be invalid. This definition of *svatogrāhyatva* is expressed thus in the technical language of Nyāya:—“*prāmānyasya jñaptau svatastvam tadaprāmānyāgrāhakayāvajjñānagrāhaka-sāmagrīgrāhyatvam.*” Whenever a person knows that he cognises and does not know for the moment that he errs, he also knows that he validly cognises:—this is the contention of the advocates of *svatogrāhyatva* or the theory that validity is intrinsically made out. Thus, if a person could become aware of the existence of a cognition in him in a hundred ways without becoming aware that that cognition is erroneous and if in any one of those cases he becomes aware of the cognition only without becoming aware of its validity, the definition of *svatogrāhyatva* would not hold good and the view that validity is made out extrinsically (*paratogrāhya*) has inevitably to be accepted. The Naiyāyikas explain their position thus in regard to this question. A determinate cognition like “this is silver” (*idam rajatam*) is called *vyavasāya* and it is presented first in the *anuvyavasāya* (after-cognition or consciousness of a cognition) which takes a form like this—“I cognise this silver” (*idam rajatam jānāmi*), and in this *anuvyavasāya*, the validity of the cognition referred to is not presented. If such *anuvyavasāya* were to invariably take cognisance of the validity of such *vyavasāya*, it would not be possible to account for the doubt which an inexperienced person feels regarding the validity of such *vyavasāya*. So, in such cases, the validity of the *vyavasāya* “this is silver” should be ascertained through the practical result to which it leads. If the voluntary decision and activity following such *vyavasāya* should turn out to be fruitful and if the knower should actually find himself in a position to get the silver which he wanted, such *vyavasāya* (cognition) is recognized to be valid. The process of inference through which one’s mind may pass in such cases is usually put in this form: “This cognition is valid.

because it leads to a fruitful effort; any cognition that leads to a fruitful effort is valid, as another valid cognition already realised to be such in experience. (*idam jñānam pramā; saphalapra-vṛttijanakatvāt; yadyat saphalapravṛttijanakam tat jñānam pramā; yathā pramāntaram*). It should be borne in mind, in this connection, that causing fruitful effort is, according to Nyāya, the ground of inferring validity, while validity itself consists in the cognition in question cognising a thing as possessing an attribute which it really has. In that the Naiyāyikas make the ascertainment of the truth of a cognition dependent upon its agreement with its expected workings or, in other words, with the consequences which are expected to arise from it in the experience of the active subject, their view would appear to be closely similar to that of the modern pragmatist. However, they do not lose sight of the fact that pragmatism is only a method of ascertaining truth, that this method itself presupposes *truth* whose nature has to be explained independently of agreement with practical workings and that, if the truth presupposed by the pragmatic argument were itself to be ascertained pragmatically through inference, the fault of *regressus ad infinitum* would inevitably follow. Giving due regard to such difficulties, the Naiyāyikas define truth as consisting in correspondence with reality and thus combine their pragmatic theory with a theory which has much in common with what is known as the correspondence notion of truth in western philosophical literature. The Nyāya definition of validity (*pramātva*) makes it clear that truth consists in correspondence with reality. The Naiyāyikas also point out that, only in cases where a cognition leads to effort in practical experience or it happens to be *pravartaka*, it becomes necessary to ascertain the validity of such cognition in order to ensure unfaltering effort (*niṣkampapravṛtti*); and that, on the first occasion of halting effort (*sakampapravṛtti*), it is not necessary that the cognition leading

to such effort should have been definitely made out to be valid and it would do if such cognition should not have been definitely ascertained to be invalid. It can be easily seen from this that there is no room for any fear of *anavasthā* (endless regression) or *ātmāśraya* (self-dependence) in the pragmatic method of inferring truth as employed by the Naiyāyikas. In respect of the question how validity and invalidity are brought about, the Nyāya theory is that they are brought about by certain extrinsic circumstances which, for the sake of convenience, are called *gunas* (good features) and *doṣas* (defects); in other words the Nyāya theorists maintain *paratastva* (extrinsicity) in respect of the *utpatti* (production) of validity and invalidity of a cognition as well as in respect of their *jñapati* (knowledge). For instance the validity of a perception is secured by the good feature (*guṇa*) consisting in the adequacy of the contact between the sense-organ concerned and its object; and its invalidity is the result of defects such as distance and some disease affecting the sense-organ.

It would be interesting to make here a comparative study of the epistemological theories put forward by other schools of Indian philosophy about the way in which truth and error are made out. The Sāṃkhya maintain that both validity and invalidity are intrinsically made out in the sense that it is by virtue of the reflection or proximity of the same *cit* (self-luminous consciousness), that the existence of a cognitive *vṛtti* and its validity or invalidity are illuminated. Prābhākaras make no difference between *vyavasāya* and *anuvyavasāya* and maintain that, in every cognition, the knower, the known object, and knowledge itself, along with its validity, are presented. They advocate the theory of intrinsicity (*svatastvapakṣa*), in so far as validity (*pramātvā*) is concerned; and there is no question of error (*apramātvā*) in their theory, since they maintain that all experiences are valid (*anubhūtiḥ pramā*). The Bhāṭṭas contend

that cognition is to be inferred through its effect, called *jñātātā* or *prākāṭya*, which consists in what some of them describe as a temporary luminosity (*prakāśa*) arising in known objects and referred to in propositions like 'this is known' (*ayam jñātaḥ*); and that, in such inference, the cognition which has caused *jñātātā*, and its validity are presented. The validity which is thus intrinsically made out may be stultified by a subsequent sublating cognition; and thus, in the Bhāṭṭa theory, invalidity (*apramātra*) is extrinsically made out. The Bhāṭṭas are, therefore, to be taken to advocate *svatastva* in the case of validity and *paratastva* in the case of invalidity. Murārimiśra, who does not go the whole hog either as Prābhākara or as Bhāṭṭa, but who is undoubtedly a Mīmāṃsaka, recognises, like a Naiyāyika, that a cognition (*vyavasāya*) is cognised by its after-cognition (*anuvyavasāya*), but maintains, unlike a Naiyāyika, that the validity of *vyavasāya* is also presented in the same *anuvyavasāya*. It will thus be seen that Murārimiśra is an advocate of the theory of the intrinsic-ality of validity (*pramātvam svaṭo grhyate*). The Bauddhas, on the other hand, hold that all determinate knowledge (*savikalpaka*), in so far as one is conscious of it, is erroneous (*apramā*) and its *apramātra* is intrinsically made out; while, through inference, the validity (*pramātra*) of indeterminate cognition (*nirvikalpaka*) is extrinsically made out. The Buddhists thus advocate the theory of extrinsicity (*paratastvapakṣa*) in regard to validity and intrinsicity (*svatastvapakṣa*) in regard to invalidity. According to the Advaitins, the validity of a cognition is intrinsically made out in the sense that the witnessing inner spirit (*sākṣicaitanya*), which illuminates the valid cognitive *vr̥tti*, also illuminates its validity (*pramātra*); and the invalidity (*apramātra*) of a cognitive *vr̥tti* is inferred extrinsically, through the resultant effort becoming futile.

In order to evaluate adequately the different theories of *pramātva* and *apramātva* set forth here, it is necessary to note that the Naiyāyikas would answer in the affirmative, the question—‘Is error possible in realism?’—and would explain the possibility of error by showing how a real substantive (*viśeṣya*) and a real attribute (*prakāra*) may be erroneously correlated when they are presented in cognition and thus save realism itself from being ruined by conceding the possibility of error. The Prābhākara realists think that any concession of the possibility of error (*bhrama*) would spell the ruin of realism and insist that all experiences are valid (*anubhūtiḥ pramā*) and that the so-called *bhramas* involve an element of non-discrimination (*aviveka*). The Bhāṭṭa realists adopt the *anyathākhyāti* of Nyāya with suitable modifications; and in order to effectively preserve realism, they would make the knowledge of cognition (*jñāna*) dependent upon the knownness (*jñātatā*) of the object (*jñeya*) and thus provide an effective counterblast to idealism which seeks to merge all *jñeya* in *jñāna*. The Buddhist idealist rules out truth and considers all determinate knowledge (*savikalpaka*) erroneous. The advocates of the theory of intrinsic validity (*prāmāṇyasvatastvavādinah*), more especially the Bhāṭṭas and the Advaitins, would generally emphasise the ideas that, in a valid cognition, the object is not stultified by a subsequent sublating cognition and is not merely re-exhibited through a reminiscent impression, the former of these two features being stressed in particular; and this way of looking at *pramātva* would be quite in accord with the view that *apramātva* is made out extrinsically and *pramātva* intrinsically. It may also be noted, with advantage, that, in the Nyāya theory, *anuvyavasāya* (the subject-centred after-cognition) is regarded as self-luminous (*svaprakāśa*) in the sense that it reveals itself along with the *vyavasāya* (the object-centred cognition in which the knower and knowledge are not presented); and that, in this respect,

the Nyāya realist seeks to combine in a way his objectivism with an aspect of subjectivistic thought which is not incompatible with his realism. In this kind of compromise, a danger is lurking, as students of Advaita may easily see, and this danger consists in the manner in which the Nyāya view lends itself to *anuvyavasāya* being treated as a fragmentary appearance of the absolute reality represented by the absolute self-luminous consciousness called *cit*.

An intelligent attempt to review synthetically all the theories of *bhrama* known to Indian philosophy will bring to light the fact that, in some manner or other, a negative element is involved in every one of the five *khyātivādas* (theories explaining the nature of *bhrama*). In the *asatkhyāti* doctrine, the negative element is obvious; and in *ātmakhyāti* doctrine, it is obvious in so far as objective externality is concerned. In the *anyathā-khyāti* view, the negative element is to be found in the *sāmsarga* part or in the idea that one reality is presented as another reality which it is not or that a real substantive is presented as having a real attribute which it has not; and in the *akhyāti* doctrine, one can easily detect the negative element in the idea of non-discrimination (*aviveka*). The *anirvacanīyakhyāti* doctrine appears on the surface to eschew the negative element from the conception of *bhrama*; but, in fact, the negative element is replaced by *relativity* which implies a negative element and transfers the negative element from the side of object to the side of definite predications (*nirvacana*) with reference to the object. A careful investigation of the Advaitin's *anirvacanīyakhyāti*, as compared with the other theories of *bhrama*, would lead to the mystery of *error* being unravelled through the disentanglement of *negativity*, which is the inner core of *bhrama*. But this would not amount to all the theories of *bhrama* being reduced to the level of *asatkhyāti*; for, it should be remembered that *negativity* is only the other side of *relativity* and an aspect of *reality*. If one might be permitted

ere to indulge for a while in epigrammatising, one might well say that *yes* (*sat*) and *no* (*asat*) are the fulcrum of all epistemology as they are of all metaphysics; that *yes* and *no* are but phases of the same reality; that all appearances are the offspring of a cross between *yes* and *no*; that it will be evident through the gemination of *yes* and *no*, that *yes* is *no* and *no* is *yes*; and that error (*bhrama*) is the antechamber of truth (*pramā*).
